

# STOCKS, BONDS AND INFLATION: A LONG-TERM PERSPECTIVE, 1960 TO PRESENT

An examination of past capital market returns provides historical insight into the performance characteristics of various asset classes. In addition, a closer look at Canadian stocks provides insight into several significant market declines and recoveries and a number of historical events for each of those time periods.

This graph represents the hypothetical growth of a \$1 investment in four traditional asset classes, as well as inflation, over the period from January 1, 1960, through December 31, 2002. All indicated returns are total returns in Canadian dollars as at December 31, 2002. This graph is for illustrative purposes only and does not represent future performance of any investment option. It is not possible to invest directly in an index.

Read a fund's prospectus and consult your financial advisor before investing. Mutual funds are not guaranteed; their values change frequently and past performance may not be repeated. Investors will pay management fees and expenses, may pay commissions or trailing commissions, and may experience a gain or loss.
